

MIT-MagnoProof 6

Software for the analysis of dowel and tie bar positions for DBI-inserted bars and dowels in baskets

THE SMART PRECISION

MIT-MagnoProof 6 Basket

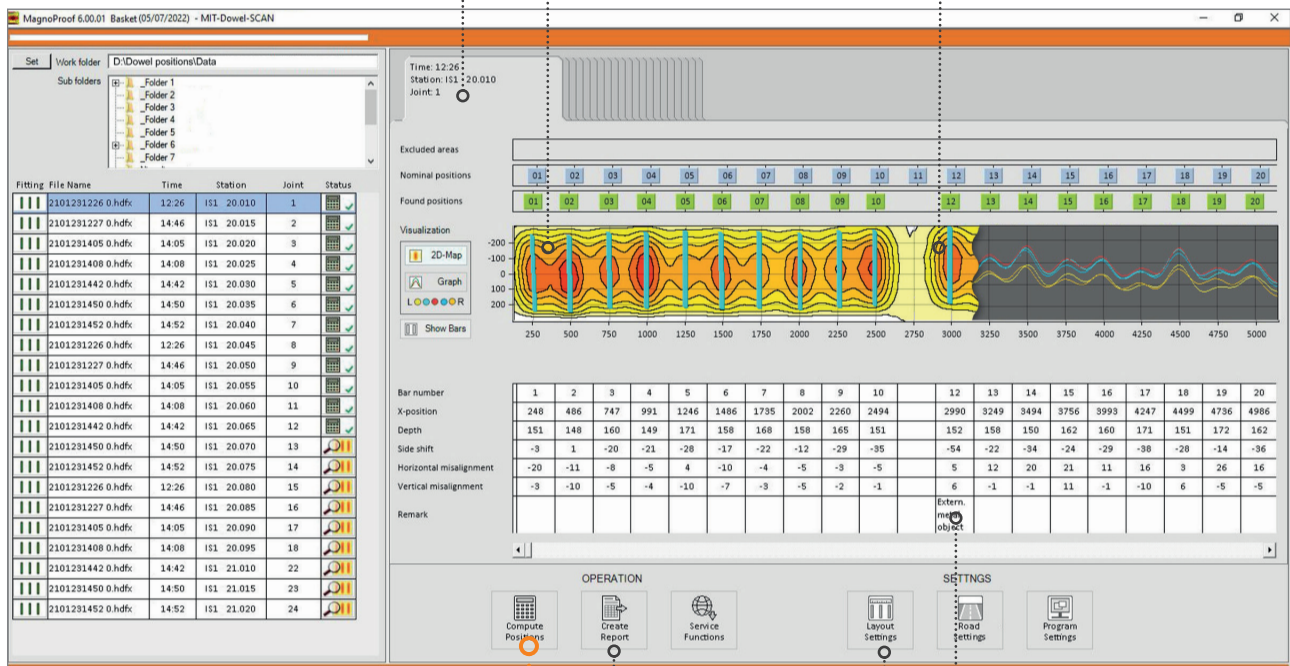

Achieve results more efficiently with new tools.

All functions are accessible in a clear and simple interface.

All measurements in a test series can be viewed and edited in parallel.

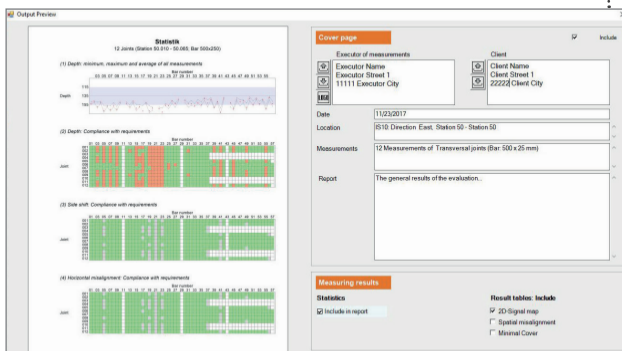

Visualization of the determined bar positions affords their intuitive understanding.

Real time preview can be switched between signal curves and a colored 2D-signal map.

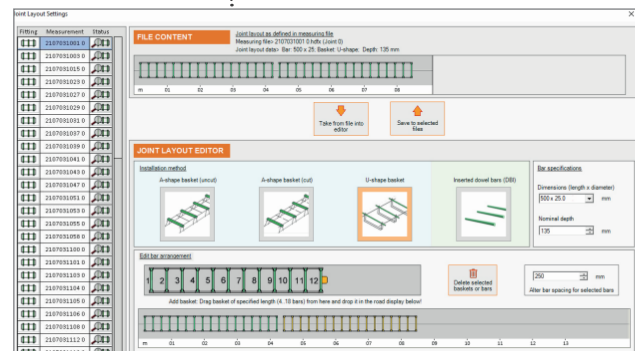

Precise analysis of measurements takes place within seconds.

Result table contains automatically generated indications of signal interferences that can be altered.

A complete evaluation report is generated and can be supplemented with current project data.

A graphic interface affords the adaptation of a previously inputted installation plan.
